Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 38-45 and 51-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Metais-5234458.

Metais discloses a device having two end hubs attached to the ends of wire elements having barbs which can move from a position approximately parallel with the longitudinal axis of the device to a position bowed outwardly. The manner of manufacture is given no patentable weight, only the ending structure.

Claims 38-40,44-46,51,52,54 and 58-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Uddin-3540431.

Art Unit: 3761

Uddin discloses a device having one hub attached to ends of spring elements having barbs at their free ends. The elements can move from a position approximately parallel with the axis to an outwardly inclined position.

Claims 38-43 and 51-57 are rejected under 35 U.S.C. 102(b) as being anticipated by Moll, et al.-5522790.

Moll discloses a device having end hubs attached to ends of spring elements which move from a position parallel to the axis to a position inclined and bowed outwardly.
